

# AQUATUS

True Touchless - Don't compromise!

The development of the Aquatus had one principle: Don't compromise!

Also a brushless machine should still deliver the same results as any other Christ machine: A great wash. The combined chemical applicator and high pressure bar does make this possible. It keeps an even distance to the car so that the chemicals can reach all parts of the vehicle in the same concentration. The combination of different chemicals will soften up even persistent dirt and the contouring high pressure system will clean it off easily.

Following the Christ philosophy there is no great car wash without a great drying system. Also when it comes to drying, the Aquatus does play in the same league as all other Christ machines. A contouring roof dryer, side dryers and a total drying power of 14 kW will leave no water, only satisfied clients. This machine targets countries with a high share of touchless machines but also any operator that is looking for a competitive edge.

## Technical specifications

Model (Type)	Aquatus (C166)
Ideal hall size (L x W) [m]	10 x 5
Passage heights [mm]	2.250
	2.350
	2.450
	2.550
	2.650
Passage widths [mm]	2.400
Track widths [mm]	2.500
	2.700
	2.800
	3.126
Wheel guiding tube widths [mm]	2.050
Roof dryer [kW]	2 x 3,0
Side dryers [kW]	2 x 4,0

### Available technologies:

- Active foam
- Tire high pressure
- HP-pretwash
- Vitesse option
- Foam wax
- Protect Shine Xpress
- Vario Touch
- Program display
- Under-chassis wash
- Visus-display
- Opti-air dryer
- Jointed brush

### Multi-stage chemical application

In several stages different chemicals are applied to the vehicle to soften up any crusted dirt. With our contouring application system the chemicals will be evenly applied to all areas of the car. Two chemicals are included in the basic version, a third is available as an upgrade.

### Contouring high pressure

A unique high pressure system follows the contour of the car and keeps the water pressure on each point of the car even. This means a superior wash result at comparatively low water consumption rates. This feature is included in the basic machine.

### Oscillating side high pressure

The oscillating side high pressure effectively cleans the sides and sill areas of the vehicle. With 8 powerful jets and 80 L/min is this system similar to the Vitesse High Pressure Option, but is already included in the basic model.

### Contour-following roof dryer

In operation for over 15 years and optimized each year: Out contour-following and 140° rotating roof dryer can follow contours of SUVs, sports cars and anything in-between. Two drying fans with 3 kW each will effectively clear all vehicles of remaining water.
